Kubota Inter-row Cultivator Range Now Arrive with Integrated Seeding and Fertiliser Application Systems

Kubota has announced a major upgrade to its inter-row cultivator range IC series. With the introduction of factory-integrated seeding and fertiliser application systems, Kubota is expanding its commitment to precision agriculture and sustainable weed control.

Fertiliser application whilst weeding with the Kubota IC3000F, front hopper SH1600 and distribution head

Kubota offers two solutions of integrated seeding and fertiliser application with a wide range of options to best suit individual farmer requirements. All assemblies are delivered fully factory-installed for plug-and-play operation. Plus, factory-fitted solutions also include the Kubota after-sales support with a quick and dependable service. This will ensure quality, reduced lead times, and simplified after-sales support.

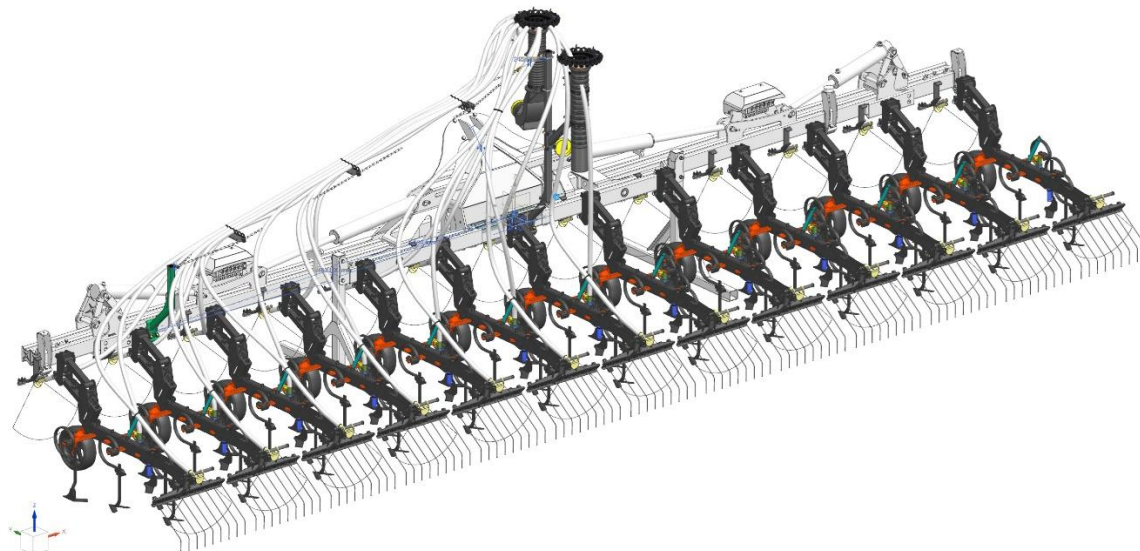

Kubota IC series with SH200 and SH500 Seeders

The Kubota pneumatic seeders SH200 and SH500 are the perfect choice to sow cover crops or nurse crops between existing crop rows. Farmers can choose from a range of options:

- 200 liters or 500 liters hopper capacity
- Electric or hydraulic metering system
- Seed placement either ahead of the weeding tines or behind, followed by a finger harrow

Safe access and easy filling is ensured by safety-compliant steps and platform.

Kubota IC series with distribution heads

Fitted with Kubota distribution heads, these systems bring flexible seeding and fertilisation options directly to the IC range, ready for both cover crop sowing and precision fertilisation. Configurations can be tailored for:

- Seeding: outlets positioned at the front of the tines or on the finger harrow at the rear
- Fertilisation: outlets mounted on lateral tines for precise placement alongside crop rows

The system is fully compatible with Kubota front hoppers SH1600/SH2200, available for working widths up to 12 metres and multiple row configurations. All assemblies are delivered fully factory-installed for plug-and-play operation.

Retrofit Kits for Existing Equipment

For farmers already running Kubota inter-row cultivators, complete retrofit kits are available, offering the same integrated performance without the need to replace existing machinery.
