PRESS RELEASE
10.11.2026

Kubota builds on proven RTV-X series with key upgrades

An upgraded heavy-duty transmission leads a series of targeted improvements, shaped by customer feedback and the demands of everyday work.

Kubota has introduced the latest evolution of its RTV-X Series, bringing together improvements in durability, operator comfort and everyday usability to meet the demands of professionals working across agriculture, groundcare, estates and construction.

Building on the proven strengths of the RTV range, the updated models introduce a series of targeted enhancements, including an upgraded heavy-duty transmission, refined operator controls, refreshed exterior styling and new heavy-duty tyres.

Central to the improvements is Kubota's new High Durability VHT-X (HD VHT-X) transmission. Featuring a revised hydraulic pump and motor design, the system has been engineered to provide greater resistance to wear during frequent dynamic braking, supporting long-term reliability in demanding working environments.

Further refinements to the transmission's internal components improve gear selection, making it easier for operators to move between driving ranges. Together, these developments deliver a more refined driving experience while reinforcing the durability for which Kubota utility vehicles are known.

Operator usability has also been improved through a redesigned parking brake lever. Its revised shape and internal linkage reduce the force required for operation, making engagement and release easier throughout the working day.

The latest RTV-X also introduces a refreshed exterior design, incorporating a redesigned bonnet, grille and front bumper. New LED headlights provide improved visibility in low-light conditions, while giving the vehicle a more distinctive, contemporary appearance.
A new heavy-duty multi-purpose tyre is now fitted as standard across the RTV-X range. Designed to improve wear resistance, the updated tread pattern delivers long-lasting performance across a variety of working environments.

These developments complement the RTV-X's established capabilities, including its Kubota three-cylinder diesel engine, selectable four-wheel drive and hydraulic tipping cargo bed, providing the traction, carrying capacity and practicality required for a wide range of applications.

Customer feedback has played a central role in the development of the latest RTV-X Series, with Kubota focusing its improvements on the areas that matter most to operators. The result is a machine shaped by the people who use it every day.

About Kubota

Since 1890, Kubota has been a leading manufacturer of agricultural equipment, construction machinery, lawnmowers and industrial engines since 1890. With its global headquarters in Osaka, Japan, branches in more than 120 countries and more than 52,000 employees across North America, Europe and Asia. Although machinery is the main product line, Kubota also manufactures a wide range of products, such as municipal water treatment systems, irrigation systems, pipework systems, various materials for roofing and house building, as well as large gate valves and valves

Our Mission

Our brand statement, ‘For Earth, For Life’, embodies our commitment to protecting the environment and at the same time supports the production of food and drinking water supplies, which are essential for meeting the needs of our society as the world’s population continues to grow. We fulfil this mission with our Kubota tractors and agricultural machinery used in harvesting to, or when our construction machinery digs to lay drinking water pipes, thereby reliable protection. Further information about Kubota can be found at www.kubota-eu.com or www.kubota.com.
